

PERFORATION & SLOTTING

Ozcon Engineering are able to provide both perforated and slotted products. Our perforation and slotting machines have been designed, developed and manufactured in-house.

DESCRIPTION

Perforation

Variety of hole sizes and patterns available. Most common drill size used is 12.7mm (1/2" hole). Most common pattern is 18 x 1/2" holes per foot.

Slotting

Variety of slotting patterns. Most common slot size is 2.5mm wide and 200mm long. Most common pattern is 114 slots per 6m pipe.

APPLICATIONS

- Dewatering
- Degassing
- Water production bores
- Injection wells

BENEFITS

Due to Ozcon's custom developed manufacturing machines, we are able to produce perforated and slotted products to a wide variety of customer requirements at the highest possible level of quality. Also being able to manufacture these products locally in Australia means that there are significant lead time advantages to using Ozcon's perforated and slotted products.
